PROFESSIONAL SUMMARY

Machine Learning Engineer with a strong foundation in full stack development, focused on building scalable, data-driven applications. Proficient in Python, SQL, and modern web technologies, with experience in data preprocessing, model development, and deployment. Eager to contribute to innovative teams by applying machine learning, backend engineering, and problem-solving skills to deliver impactful solutions.

EDUCATION

GLA University

B.Tech, Computer Science & Engineering (Specialisation: AI/ML)

Mathura, Uttar Pradesh

Aug 2022 – May 2026

Lucknow Public School

Intermediate (Class XII)

Lucknow, India

May 2022

Lucknow Public School

High School (Class X)

Lucknow, India

May 2020

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, SQL

ML / AI: NumPy, Pandas, Matplotlib, CNN, RNN, Linear & Logistic Regression, Decision Tree, Random Forest, Model Deployment

Web & Frontend: React, React Native, Tailwind CSS, HTML, CSS

Backend & APIs: Node.js, Express.js, FastAPI, REST API Design, Prisma ORM

Databases: MySQL

DevOps & Tools: Docker, Git, GitHub, CI/CD Pipeline

Soft Skills: Problem-Solving, Leadership, Collaboration, Communication

PROJECTS

AI Finance Platform | React 19, Tailwind CSS, Prisma ORM | GitHub

Dec 2024

- Built a full-stack AI-powered personal finance platform using React 19, deployed on Vercel with Tailwind CSS for responsive UI design.
- Designed and integrated a PostgreSQL-backed database schema using **Prisma ORM** and **Supabase**, enabling real-time data sync and user-specific financial dashboards.

Recommendation System with Frontend | Python, FastAPI, HTML, CSS, JavaScript |

May 2025

- Developed a collaborative filtering recommendation engine in Python achieving over 85% relevance accuracy on a dataset of 5,000+ user-item interactions.
- Exposed the recommendation model via a **FastAPI** REST API, following **REST API design** best practices with versioned endpoints and JSON response schemas.
- Containerised the backend service using **Docker**, reducing setup time and enabling consistent deployment across environments.
- Built an HTML/CSS/JavaScript frontend for real-time suggestion display, integrating directly with the **FastAPI** backend via async fetch calls.

Drink and Drive Detection with Ignition Lock | Python, IoT Sensors, Random Forest | GitHub

Aug 2025

- Designed and built an IoT-integrated drunk-driver detection system using alcohol and motion sensors interfaced with a vehicle ignition relay circuit.
- Trained a **Random Forest** classification model on 2,000+ labelled sensor readings, achieving 91% detection accuracy with under 5% false-positive rate.
- Implemented real-time **model deployment** pipeline: sensor data streamed to a Python inference script, triggering ignition lock when BAC threshold was exceeded.

EXPERIENCE

Front End Developer Intern

April 2023 – Sep 2023

Njuma Consulting

Remote

- Developed a cross-platform E-learning application using **React-Native** (Express.js, React), focusing on responsive UI and smooth user experience..
- Integrated **REST APIs**, authentication, and navigation features to support course delivery and user progress tracking.
- Collaborated with cross-functional teams to implement features, fix bugs, and optimize application performance.

Full Stack Developer Intern

Jun 2024 – Sep 2024

CodeSquadz

Remote

- Developed a production-style e-commerce web application using the **MERN stack** (MongoDB, Express.js, React, Node.js), supporting product browsing, cart management, and order history.
- Designed and implemented **8 RESTful APIs** following **REST API design** principles covering product management, user authentication (JWT), orders, and payment processing.
- Managed version control and code reviews via **Git** and **GitHub**, maintaining a clean commit history across a team of 4 developers.
- Improved average API response time by 30% through MongoDB query optimisation and selective field projection.

ACHIEVEMENTS & ACTIVITIES

Captain, GLA University Basketball Team – Led a team; developed leadership, strategic thinking, and high-pressure decision-making skills.

AI/ML Specialization – Pursuing advanced coursework in neural networks, deep learning, and applied machine learning as part of B.Tech curriculum.
